

# From Zero to Front-end Ninja

Workshop 1 – Web development basics

# Today's Plan

- 
- 1.Intro to HTML & CSS
  - 2.HTML: Tags & Page structure
  - 3.CSS: Layouts & Position
  - 4.Practice project

# HTML & CSS

HTML, HyperText Markup Language, gives content structure and meaning by defining that content as, for example, headings, paragraphs, or images. CSS, or Cascading Style Sheets, is a presentation language created to style the appearance of content—using, for example, fonts or colors.

# HTML & CSS

**HTML**

**CSS**

# HTML: Structure

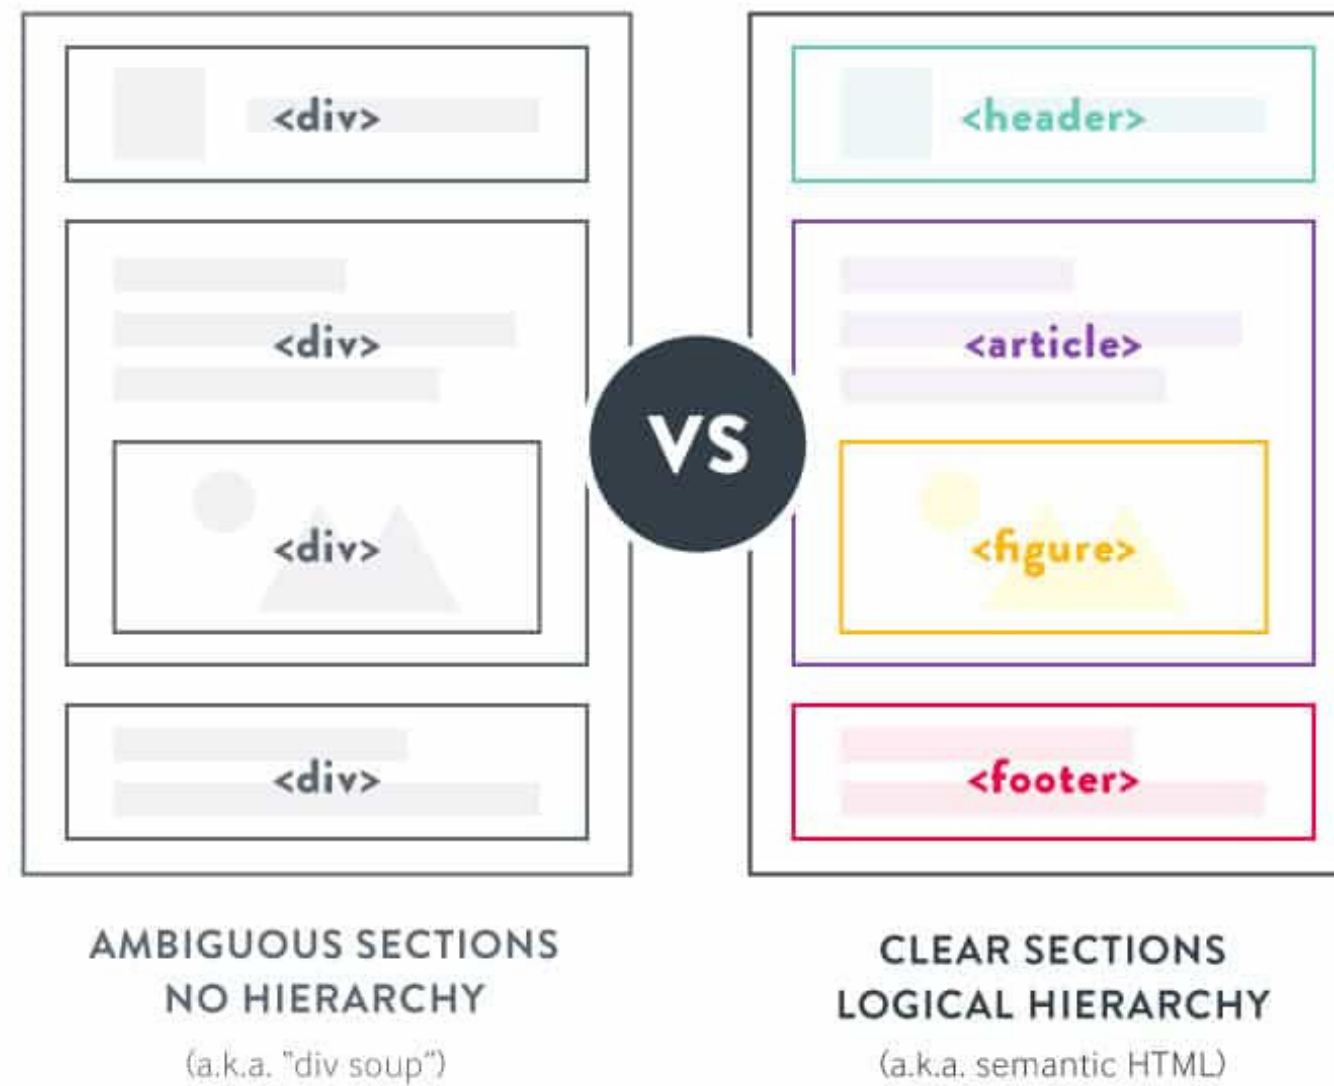

Elements (tags) are the basic building block of an HTML page

Paragraph == `<p></p>`

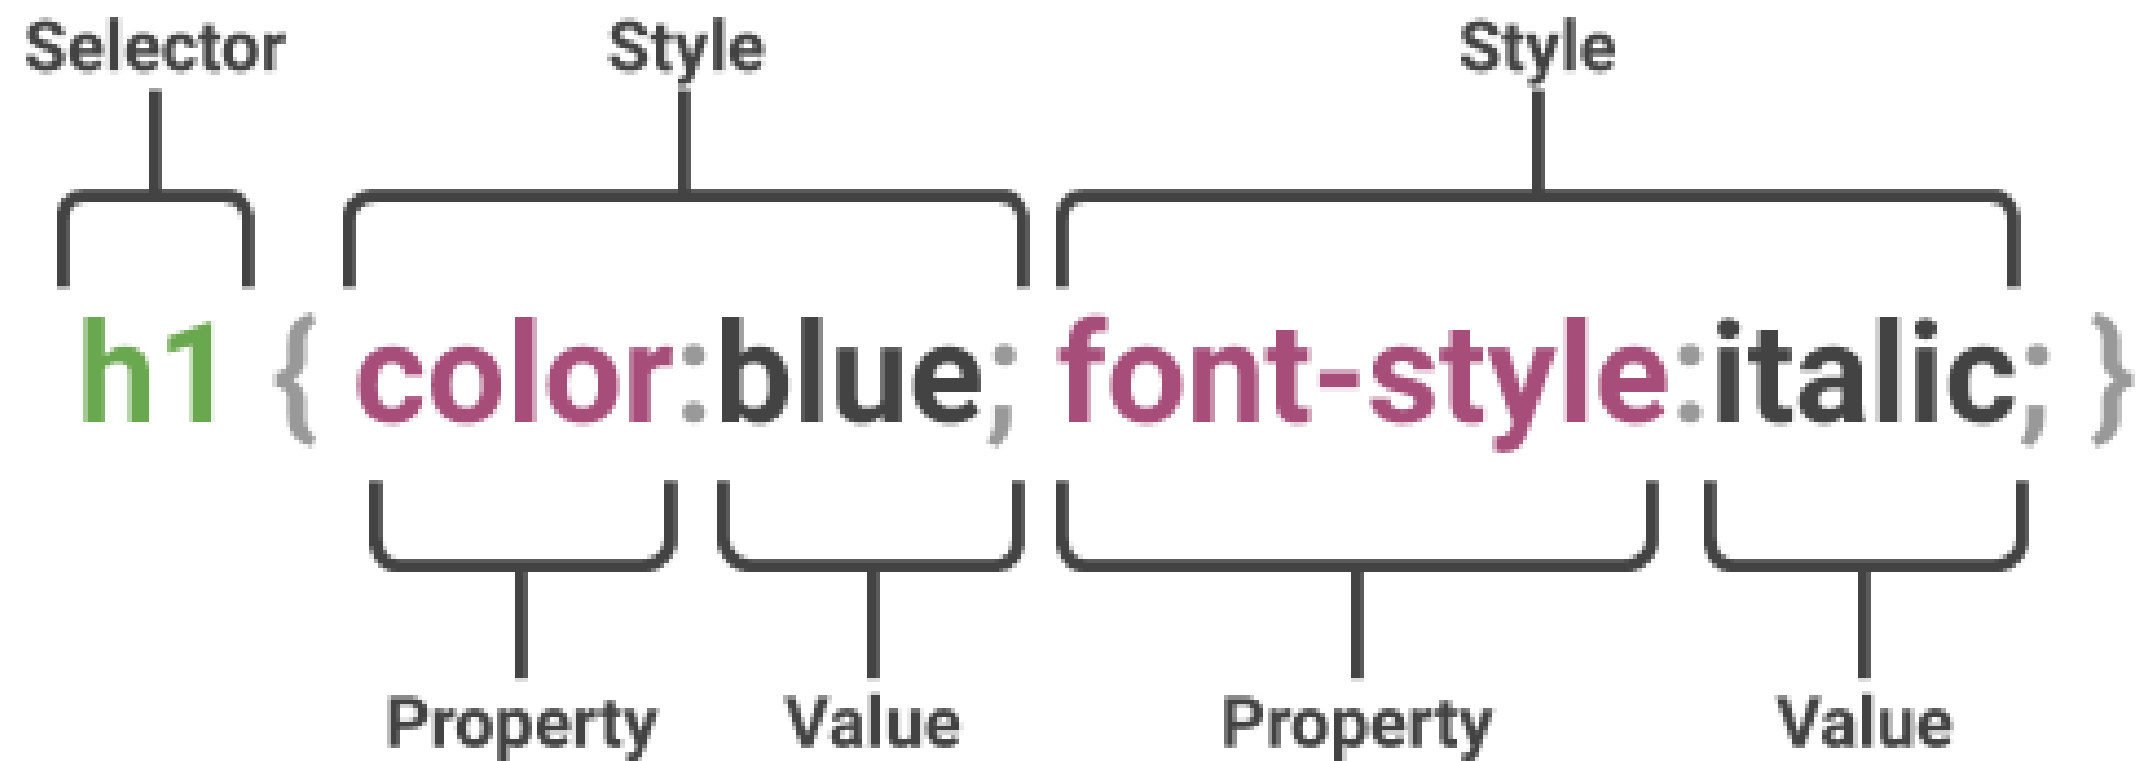

image == `<img />`

# HTML: Semantics

# CSS: Syntaxe

# CSS: Layouts

## Flex box

One-dimensional layout model

## CSS Grid

Two-dimensional layout model

# Let's practice!

# Challenge

- Make it your own
- Use CSS grid for layout
